                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 X-RAY CRYSTALLOGRAPHY (3.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                function as the catalytic residues are missing SIMILARITY: Belongs to the transferrin family.

Rapid purification of poroine colostral whey lactoferrin by affinity chromatography on single-stranded DNA-agarose. Characterization, amino acid composition and N-terminal amino acid sequence.";

Biochim. Biophys. Acta 999:323-329 (1989)

L. Hiochim. Biophys. Acta 999:323-329 (1989)

C. -I- FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate.

C. -I- FUNCTION: The lactotransferrin peptidase S60 domain 1 functions as a serine protease that cuts arginine rich regions. This function contributes to the antimicrobial activity (By similarity).

C. -I- CATALYTIC ACTIVITY: Preferential at -Arg-Ser-Arg-Arg-|- and -Arg-Ser-Arg-|-, and of Z-Phe-Arg-|-aminomethylcoumarin.

-!- MISCELLANEOUS: The second peptidase 560 domain does not protease function as the catalytic residues are missing.
-!- SIMILARITY: Belongs to the transferrin family.
-!- SIMILARITY: Contains 2 peptidase 560 domains.

T "Characterization of the goat lactoferrin CDNA. Assignment relevant locus to bovine Ul2 syntemy group.";

L Biochem. Biophys. Res. Commun. 203:1324-1332(1994).

-!- FUNCTION: Transferrins are iron binding transport prote can bind two Fe(3+) ions in association with the bindin anion, usually bicarbonate.

-!- FUNCTION: The lactotransferrin peptidase S60 domain 1 fe a serine protease that cuts arginine rich region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

CANALYTIC ACTIVITY: Preferential at -Arg-Ser-Arg-Arg-| and Arg-Ser-Arg-|, and of Z-Phe-Arg-| aminomethylcoumarin. SUBUNIT: Monomer (By similarity).

SUBCELLAURAR LOCATION: Secreted protein.
MISCELLAURBOUS: The second peptidase S60 domain does not have protease function as the catalytic residues are missing. SIMILARITY: Belongs to the transferrin family.

SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              by the UniProt Consortium, under the Creative Commons

## ADG46078; ADG46078 standard; peptide; 13 19-MAY-2003; 2003EP-00011334. antibody; carbohydrate-deficient transferrin; CDT; non-glycosylated transferrin; alcoholism; alcoholic; diagnosis; human. Human CDT peptide fragment 25-MAR-2004 07-JAN-2004. EP1378521-A1. Homo sapiens. (first entry) ₽

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMGCKEDLIVELL, TTEDSIAKIMNGEADAMSLDGGF, SKLSMSGCKNLSEPN and YEKYLGEBYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

WPI; 2004-073743/08.

         The invention relates to a method of managing, treating or ameliorating a respiratory infection or its symptom in a human subject by administering an interleukin-9 (II-9) antagonist. The method further comprises administering to the subject an anti-respiratory syncytial virus (anti-RSV) antigen antibody. The anti-RSV antigen antibody is palivizumab. The method further comprises administering a leukotriene modifier, which is montelukast, zafirlukast, pranlukast or zileuton. Also disclosed are: a method of preventing the development, onset or progression of asthma or one or more asthma-like symptoms in a child, a method of preventing, managing, treating or ameliorating wheezing in a human subject, and a method of preventing, managing, treating or ameliorating wheezing in a human subject, and a method of preventing, managing, treating or ameliorating wheezing in a human subject, and a method of preventing, managing, managing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, whice lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Managing, infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Respiratory infection; human; interleukin-9 antagonist; IL-9; respiratory syncytial virus; anti-RNS antigen antibody; leukotriene modifier; asthma-like symptom; wheezing; allergy; immunomodulatory; anti-inflammatory; anti-viral; antibiotic; antifungal; mast cell modulator; virucide; antibacterial; fungicide; antiasthmatic; antiallergic; 4D4 antibody; variable heavy chain; VH;
